Major U-turn on wood-burning stoves

'The Government acknowledges that it is possible to significantly reduce the level of smoke emitted through domestic burning if the right fuels, appliances and practices are used.'

The Ministry of Housing, Communities & Local Government

SNP ban on woodburning stoves
scrapped because alternatives
are 'more polluting'

✓ Yes - You can install a wood-burning stove in your home.

The UK Government has confirmed stoves will be allowed under the Future Homes Standard as an approved secondary heat source.

You can enjoy the warmth and independence of real wood heat alongside your modern energy system.

✓ Yes - Modern stoves are eco-smart.

Today's Ecodesign stoves burn cleanly, efficiently and responsibly. When paired with Ready to Burn - certified wood, you get lower emissions and better fuel savings - with 90% fewer particulates than open fires and 80% less than older stoves.

✓ Yes - You're doing the right thing.

Wood is a renewable, local, low-carbon energy source.

Using a stove supports rural jobs, woodland management, and keeps your home resilient in power cuts.
